**Problem:**

Add a plain view and two labels to the Problem One scene to represent a photo and a first and last name label. Using the attributes inspector, set the background color of the plain view to Black so that it is visible. Using the attributes inspector, set the background color of the two labels to Light Gray so that their size is visible. Change the text of the first label to "First Name Label With Long Text" and the text of the second label to "Last Name Label With Long Text". Do not change the default font of the labels.

Add constraints to the scene to express the following layout requirements:
- There should be 20 points of visual space between the top and left sides of the plain view
- The plain view should have a width that is equal to half the width of the scene
- The plain view should have a height that is equal to its width
- There should be 8 points of visual space between the plain view and the labels
- The top of the first name label should be aligned with the top of the plain view
- There should be 8 points of vertical visual space between the two labels
- Both labels should respect their intrinsic content size unless there would be less than 20 points of visual space between them and the right edge of the scene, in which case they should be truncated
